

Symmetry Dispensers

All Symmetry dispenser levers and front faceplates have IONPURE.

What is IONPURE?

IONPURE is an antimicrobial agent used in plastics and silicone. IONPURE is an inorganic, soluble glass containing antimicrobial metal ions that are effective against 99.9% of a wide variety of microorganisms including Methicillin-resistant microorganisms.

How does IONPURE work?

With the presence of water or moisture, the soluble glass will release silver metal ions at a controlled speed that function as antimicrobial materials that successfully inhibit the growth of microorganisms.

Symmetry strives to continue to implement and provide new technologies in creating the healthiest environment possible. Clean hands share health.
